

LAKHTA TOWER AND MULTIFUNCTIONAL BUILDING ST. PETERSBURG ARCHITECT: GORPROJECT, RMJM
LARGEST TOWER IN EUROPE WITH 462M ALL TOWER GLAZINGS WITH COLD BENDED GLASS

ENGLISH

STAATSPREIS FÜR CONSULTING

Das Bundesministerium für wirtschaftliche Angelegenheiten
ist bestrebt, die Leistungsfähigkeit der österreichischen
Ingenieurbüros aufzuzeigen, und verleiht daher im
Zusammenwirken mit der Bundesfachgruppe Internationales
Consulting der Bundes-Ingenieurkammer sowie dem
Fachverband Technische Büros der Bundeswirtschaftskammer

im Bereich **Planungsexport, Spezialaufgaben**

der Firma

AFC Planungsgesellschaft m. b. H. Bernhard Ötsch

eine

STAATLICHE ANERKENNUNG 1993

Wien, im November 1993

Der Bundesminister für wirtschaftliche Angelegenheiten:

Dr. Wolfgang Schüssel

AFC Aluminium Fassaden Consulting GmbH is an engineering company specialized in window facade and curtain wall construction based in Vienna, Austria. AFC has been active for more than 35 years in the field of international engineering. It is through our experience from concept planning to completion of large scale projects that our „know how“ has been acquired and our standards at the international level has been established.

Gerald Schranz
CEO

Bernhard Ötsch
CEO

AFC projects can be found in over 34 different countries - from the roof lights of the National Gallery in London, the Telecom Tower in Kuala Lumpur, the Potsdamer Platz in Berlin, the Ministry of Defence in Bristol to the New Hong Kong Airport. Further highlights are the Soccer City Stadium in Johannesburg / South Africa and the tallest building in Europe, the Lakhta Tower in St. Petersburg.

The concept for the design is the task of the architect. AFC has worked with Skidmore, Owings & Merrill, Sir Norman Foster, Helmut Jahn and Zaha Hadid. AFC implements the design wishes of the architect into a technically feasible and economically justifiable solution without influencing the architectural appearance and integrity.

Facade planning is not a static science but rather a dynamic process which AFC has enhanced to produce innovative and intelligent solutions. With „know how“ and creativity, we are able to manage difficult details without losing sight of the economic constraints placed on the project.

For every project, AFC develops a custom-made solution to meet the technical, physical and structural requirements of the building. As an independent company, AFC does not specify one particular product range and for large scale constructions, AFC develops a profile system that would meet the specific needs of the particular project.

In large scale projects, it is essential to keep the costs low. AFC is in the position to calculate related costs for the facade before the contracts are awarded.

AFC is responsible for the technical solutions of the entire facade. This guarantees not only optimal performance for a proper and economical construction but from experience, also a cost reduction of 10 to 15% compared to other conventional recommendations.

The scope of AFC consulting services has been developed for more than three decades of practice. This often tested procedure guarantees a successful project.

AFC employs highly qualified technicians, preferably mechanical engineers, civil engineers or architects with full qualifications. The responsible project managers have more than 10 years relevant experience.

EOD RAIFFEISEN VIENNA (A)

Austrian Consulting Engineers

This is a summary of the essential facts about Austria's consulting engineers. It deals with the legal basis for issuing licences to consulting engineers, rules of conduct governing the profession and mandatory professional qualifications and describes the work done by consulting engineers.

What are consulting engineers? What service do they provide?

There are more than 2000 engineering offices in Austria. They provide highly qualified services in every area of engineering.

Consulting engineers are not manufacturers or builders. Their activities are restricted to providing consultative services, preparing plans, and carrying out calculations, studies, inspections and measurements. Consulting engineers also supervise the completion and acceptance of projects, check that they are completed properly and that the necessary calculations are performed correctly, and monitor and check plant and equipment.

A consulting engineer is an independent and neutral agent who is not directly involved in the execution of a project - he is ordering party's trustee, so to speak.

Consulting engineers are active in every area of engineering that is taught theoretically in an Austrian educational establishment, from in-house systems (electrical engineering, heating, air conditioning, ventilation, sanitation) to water engineering, from mechanical engineering to technical chemistry, and from interior design to mining and metallurgy.

Whichever one of these fields is the consulting engineer's personal speciality, he will be a highly trained expert, because the qualifications a consulting engineer needs before he can open an office are laid down by the most stringent provisions in the entirety of the Austrian trade and industry law.

Each consulting engineer must first pass school certificate or graduate from a university. He must then spend many years in working in his field and pass demanding license examination before setting up an engineering business.

Consulting engineers advise, plan, calculate, inspect and monitor. They are there to support their client throughout a project. Their responsibilities range from examining supplier's tenders to monitoring the completion of a plant and then inspecting and accepting it. Their work may include advising clients, planning, performing calculation, and carrying out studies, inspections and measurements. Their fees are laid down in the officially recognised guidelines for engineering offices.

Austria's engineering offices carry out orders totalling about 50,000 million Austrian schillings (appr. 5 billion US\$) each year. They are growing in importance as providers of thousands of highly-qualified jobs.

A Description of the Profession

Engineering offices work both independently and objectively and in the interests of their client in various of areas of speciality. A consulting engineer does not engage in mechanical production or manufacturing, whether as a professional engineer or otherwise. His output is of intellectual nature, the prerequisite for which is training as an engineer or pertinent training at an college of the arts.

1. Consultation

- 1.1 Consultation, carrying out studies and inspections;*
- 1.2 Preparing applications and submissions to authorities, representing a client vis-à-vis third parties, expert opinions, estimates; carrying out the necessary calculations in the areas of speciality of the engineering office;*
- 1.3 Advising on operational technology and technical organisation;*
- 1.4 Advising on work cycles;*
- 1.5 Improving, rationalising and automating processes and work cycles;*
- 1.6 Monitoring and inspecting plant and equipment;*
- 1.7 Training*

2. Planning

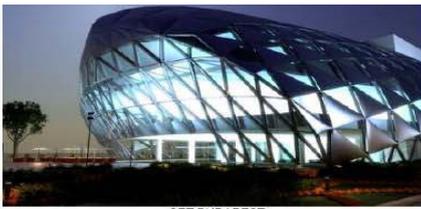

- 2.1 Planning and designing projects such as plants, structures and equipment relating to the areas of speciality of the engineering office, if necessary taking into account static requirements; old-stock, topographical and sectional surveys;*
- 2.2 Preliminary project work; preparing drafts, equipment plans ready for building, execution plans, detailed plans, key plans and construction plans;*
- 2.3 Preparing tender documents;*
- 2.4 Monitoring all work and services to check their conformity to the plans and tender;*
- 2.5 Auditing project-related invoices; accepting plants;*
- 2.6 Research and development in the areas of speciality of the engineering office; carrying out the associated studies and tests using the necessary plant and equipment;*
- 2.7 Planning and develop new technologies and process techniques in various fields;*
- 2.8 Participating in public competitions*

3. Calculation

- 3.1 Calculating technical and financial values in the areas of speciality of the engineering office;*
- 3.2 Carrying out measurements and tests and mathematical analysis in any pertinent field;*
- 3.3 Economic appraisals, technical and economic viability comparisons.*
